WiMAX Today

- Extends public WLAN hotspots to metropolitan area coverage for mobile data-centric service delivery.
- Connect enterprises and residential users in urban and suburban environments where access to copper plant is difficult.
- Bridge the digital divide by delivering broadband in low-density areas.

WiMAX offers broadband wireless access at data rates of multiple Mbit/s to end-users within a range of several kilometers. It also offers high-speed data services to all nomadic terminals like laptops, mobile phones, and MIDs, with an optimized trade off between throughput and coverage, enabling the "Portable Internet" usage replicating on the move at the same time develop as a powerful radio access solution with many integration synergies in mobile or fixed network architecture. It will also enable end-users to benefit from an "Always Connected" experience when accessing their

applications via the best available network, at home, on the pause, or on the move.

WiMAX with us

WiMAX enjoys widespread support throughout the industry, as it allows highly innovative applications to emerge from anywhere in the world. dmedia's business architecture will allow service providers to seamlessly move content, applications and services across next-generation networks and devices with great efficiency. Applications such as voice, video streaming and online gaming will work significantly better, and WiMAX provides an effective platform for broadcast, on-demand and interactive video applications.

With WiMAX providing the connections, service providers can offer customers a host of rich applications: mobile TV, video telephony, real-time trading, and location-based services. The possibilities are tremendous and the opportunity is exceptional.

G5W WiMAX Car-Navi

- 5" widescreen touch panel
- Bluetooth
- FM Transmitter
- WiMAX
- GPRS / EDGE
- GPS

G5W works on the latest Prima with 2G of built in memory. Text to speech and Voice command enable pleasant handling and operating while navigating. Not only that it is perfect to be used as a digital photo frame, mobile WiMAX turns your G5W into a portable IPTV, and will be able to replace your in-car CD/DVD box by enabling broadband streaming video and music on it. With the built in FM transmitter broadcasting the sound through your car stereo, it truly gives you a spectacular entertaining pleasure of video and music by simple a tap on the screen. The open platform design structure enables possible functional services input through the device itself.
